AZIZ JUZAR SHAHIWALA

SUMMARY

I am a fourth-year iMScIT student (PG) at GLS University, Ahmedabad, with hands-on experience in full stack web application development using Flask, FastAPI, PostgreSQL and React. I thrive in cross-functional roles, focusing on both backend and frontend technologies while aiming to broaden my expertise in software development. Looking for backend or full-stack developer roles.

EXPERIENCE

Python Development Intern — Qskill (Virtual) June – July 2026

- Completed a Python development internship; received Certificate of Completion and a Letter of Recommendation.
- Built a voice assistant that takes voice input to set timers, show live weather, and read out news.
- Developed a Tkinter GUI matrix operations tool with dynamically generated input grids.
- Created a Flask-based sentiment analysis web app outputting polarity and subjectivity scores for English text.

EDUCATION

GLS University — Faculty of Computer Applications and Information Technology
2023 – Present

iMScIT — Integrated Master of Science in Information Technology CGPA: 8.9

– Relevant coursework: Python, Machine Learning, Java, Web Development, Information Security, Database Management, OOP.

SKILLS

Languages: Python, JavaScript, Java, SQL

Frameworks & Libraries: Flask, FastAPI, React, Scikit-learn, Tkinter

Tools & Platforms: Git & GitHub, VS Code, PythonAnywhere, Vercel, Render, SQLite, PostgreSQL

Concepts: REST APIs, OOP, Machine Learning, Information Security

Soft Skills: Team Collaboration, Formal Communication, Self-directed Learning, Problem Solving

PROJECTS

Group Expense Tracker 2026 - Present

Full Stack Web Application | React, FastAPI, PostgreSQL Deployed: Vercel + Render

– My personal best SaaS project which allows expense management for groups like roommates, friends, and teams, to keep track of group expenses when you're up for casual outing or going for a professional trip.

– This web app combines a chatroom with expense management functions. It also provides statistics on who owes whom and exactly how much is owed.

– Solves the problem of debt complexity by automating group calculations. – Currently deployed as a live project and in active development.

Qskill June - July 2026

Qskill python developer tasks | Python Uploaded on Github

– Completed a Qskill Python development internship building voice activated commands, GUI and Flask-based NLP applications.
– Voice Assistant: takes voice input to set timers, show live weather and read out news.
– Matrix Operations Tool: Tkinter GUI that generates input grids dynamically and performs the selected operation.
– Sentiment Analysis App: Flask web app that outputs polarity and subjectivity scores for English text.

WorkforceHub 2025 – 2026

Full Stack Web Application | React, Flask, SQLite Deployed: Vercel + PythonAnywhere

– Online internship and College Group Project, under guidance of MSP Concepts, We created an Fully functional HR Recruitment pipeline, with AI features included. Certificate received. Worked in a team of 3 people, myself included.
– Built a multi-module HR and attendance management system with role-based access control for admin, manager, and employee roles.
– Integrated FullCalendar with a public holiday API to render live attendance records and schedule visualisation.
– Developed an AI-powered recruitment module using the Claude API to screen and recommend candidates.
– Deployed frontend on Vercel and REST API backend on PythonAnywhere; system handles real-time data across both platforms.

DataShare Entry System 2025

Web Application | Python, Flask, SQLite, CSV Deployed: PythonAnywhere

– Designed and built an internal CRUD data entry tool with two-tier guest and staff access control.
– Implemented CSV export functionality enabling bulk data download for reporting.
– Deployed on PythonAnywhere as a live web application accessible via browser.
– Why i made this: To keep track of a business product entries. While non-staff can preview records.

StringRotator 2025

CLI Tool | Python

– Built a terminal-based 3D ASCII art renderer that applies matrix transformations to animate rotating text, with the help of AI
– Packaged and distributed as a downloadable CLI application.
– Why i made this: To learn prompt engineering.

HACKATHONS

HackOut '26 — SolesPulse, Renewable Energy Intelligence Platform Sept 2026

DA-IICT's annual Hackathon | Full-stack app with AI/ML module

Code: github.com/Azizshahiwala/solespulse

- Built SolesPulse, a renewable energy intelligence platform, during the hackathon.
- Designed a full-stack architecture with separate frontend, backend, and AI/ML modules.

HackOut '25 — Participant 2025

DA-IICT Hackathon | Participation Certificate

Competed in DA-IICT's annual hackathon; gained first hands-on experience building under hackathon time constraints.

CERTIFICATES & ACHIEVEMENTS

Java Brain Digger — Runner up 2025
GLS FCAIT CyberShadez | Certificate + Trophy

Python for Data Science 2025
Coursera | Completion Certificate

Microsoft Power BI 2025
Microsoft / Koeng | Completion Certificate

Hackout 2025 — Participant 2025
DA-IICT Hackathon | Participation Certificate

IT Treasure Hunt — Participant 2026
GLS FCAIT CyberShadez | Participation Certificate

College project — MSP Concepts 2026
GLS FCAIT | Project Completion Certificate

Generative AI — Certificate of Completion 2026
Outskill | Certificate of 2 day course completion
